

Inspired to Accelerate your process development

We understand what you need: faster process development. This inspired us to develop the new ÄKTA™ avant. Together with UNICORN™ 6 software with integrated DoE functionality, ÄKTA avant speeds up process development by allowing you to obtain the maximum amount of information from a minimum number of experiments.

ÄKTA avant is designed to achieve rapid and reliable scale-up with HiScreen™ columns prepacked with MabSelect™ and Capto™ media. Column tracking is secured by UniTag. All this is backed by the service, support, and investment in the future that GE brings to Life Sciences.

2011 AWARDS

National Academy of Sciences

CALL FOR NOMINATIONS

Contact information:

www.nasonline.org/awards
awards@nas.edu
(202) 334-1602

The National Academy of Sciences is accepting nominations to honor outstanding contributions to science and to encourage new and innovative research.

Nominations will be accepted through
September 15, 2010.

For details visit:

www.nasonline.org/awards

Agricultural Science NAS Award for the Industrial Application of Science

Chemistry NAS Award in Chemical Sciences

NAS Award for Chemistry in Service to Society
(for work in industry)

Economics NAS Award for Scientific Reviewing

Microbiology Selman A. Waksman Award in Microbiology

Physics of the Earth Arthur L. Day Prize and Lectureship

Awards for young investigators

Biology/Medicine Richard Lounsbery Award

Molecular Biology NAS Award in Molecular Biology

Optical Science NAS Award for Initiatives in Research

Psychology Troland Research Awards

NATIONAL ACADEMY OF SCIENCES

NEW PRODUCTS

BEAD-BASED HOMOGENIZER

The PowerLyzer 24 benchtop, bead-based homogenizer is designed for powerful, fast, reliable homogenization and lysis of any biological sample. The bead beating instrument is capable of processing up to 24 samples in 2 ml tubes in as little as 30 seconds. With true hands-free operation, the downtime associated with manipulating samples through multiple cycles is eliminated. Even the toughest and most difficult to process samples such as pine needles, seeds, spores, fungal mats, and skin are easily and effectively lysed. Combined with MO BIO's line of high-quality nucleic acid isolation kits developed specifically for the PowerLyzer, the instrument yields substantial quantities of intact DNA and RNA for downstream analysis.

MO BIO Laboratories, Inc.

GENE AND PATHWAY-SPECIFIC ASSAYS

Fast, reliable, ready-to-use assays and reagents allow the customization of experiments based on the gene of interest. Explore and order gene and pathway-specific products for a range of applications using GeneGlobe, QIAGEN's web portal. For miRNA research, the miScript Target Protector is available for researchers doing functional analysis of miRNAs. The new FlexiTube siRNA Premix allows convenient one-step gene silencing in low throughput applications for analysis of gene function. For DNA methylation analysis, the PyroMark CpG and custom assays are available using Pyrosequencing technology. In addition, the PyroMark OneStep RT-PCR Kit enables the reverse transcription and subsequent amplification of RNA samples in the same tube.

Qiagen

DNA SAMPLE PREP

The NEBNext products are a series of highly pure reagents that facilitate sample preparation for downstream applications, such as next generation sequencing. The NEBNext Quick DNA Sample Prep Reagent Set 2 and Master Mix Set 2 are suitable for library construction for the 454 GS FLX Titanium and GS Junior sequencing platforms. These sets provide all the necessary enzymes and buffers for fast fragment library preparation. The Master Mix Set further streamlines the workflow, reducing the number of vials by one-third. All reagents undergo stringent quality controls and functional validation by sequencing, ensuring maximum yield, convenience, and value.

DNA COPY NUMBER SERVICE

The Affymetrix Molecular Inversion Probe (MIP) Copy Number Service offers a convenient and reliable way for cancer researchers to get high-quality copy number data from formalin-fixed paraffin embedded (FFPE) samples. The MIP technology requires a small hybridizing footprint and as little as 75 ng of DNA, pairing well with the challenges of FFPE-archived samples, to examine more than 330,000 markers for good coverage across the genome. Because the MIP copy number application offers both allele and copy number data on a single platform, researchers now have a more comprehensive tool

to evaluate risk factors for the early stages of cancer and disease relapse. The MIP also enables a more in-depth analysis of cancer, including copy-neutral loss of heterozygosity, levels of normal-tumor contamination, and preferential allele amplification.

LASER SCANNING MICROPLATE CYTOMETER

The Mirrorball is a high-sensitivity laser scanning microplate cytometer for antibody discovery and fluorescence cellular screening. This instrument rapidly and reliably performs mix-and-read, cell-, or bead-based assays and offers a simple and easy solution to automated hybridoma screening without requiring the reworking of existing protocols. Simultaneous laser scanning enables superior multiplexing, resulting in higher throughput single pass scanning. This instrument is available in three upgradable configurations; the highest specification will offer dual laser excitation (488 nm and 640 nm), four fluorescence data channels, and a single laser scatter channel. Mirrorball's laser scatter channel enables label-free object recognition independent of fluorescence, which can be combined with concurrent collection of fluorescence data for even greater sensitivity in multiplexed assays.

RADIOACTIVITY PROTECTION

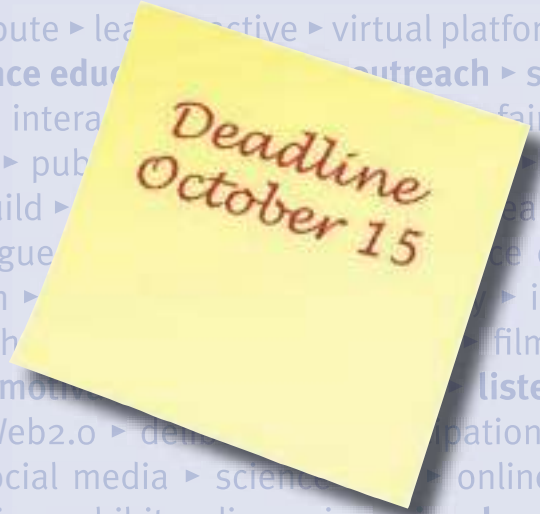

A range of acrylic radiation shielding products has been developed for use with beta or gamma emitting materials, including shields, boxes, racks, waste bins, spillage trays, and cabinets. Custom-built shields and boxes are manufactured in a variety of shapes and sizes to match any application or budget. The key features of these protective products are: clear optical construction for unobstructed view, choice of angle to suit location, availability of most shields in small and large sizes, large flat base models for under-bench protection and curved base models compatible with safety spill trays, plus boxes and bins available with hinged lids in a variety of designs and sizes. A DuoShield is available specifically for those applications which require safe protection from both beta and gamma emissions.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by *Science* or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.

AAAS Early Career Award for Public Engagement with Science

Nominations are open **now through October 15** for the **AAAS Early Career Award for Public Engagement with Science**.

With this new award, AAAS will recognize early-career scientists and engineers who demonstrate excellence in their contribution to public engagement with science activities. The award recipient will receive a monetary prize of \$5,000, a commemorative plaque, and complimentary registration and reimbursement of travel expenses to the 2011 AAAS Annual Meeting in Washington, D.C.

For eligibility information and instructions on submitting nominations, visit <http://www.aaas.org/go/PESaward>.

PCR ARRAYS

Get 2 FREE Arrays*

(Offer expires September 30, 2010)

A sunlit road in a field of sunflowers, with various scientific terms written on the pavement. The terms include: PROLIFERATION, CELL DEATH, DISEASE, DEVELOPMENT, EPIGENETICS, INFLAMMATION, OXIDATIVE STRESS, CYTOKINES, CANCER, APOPTOSIS, IMMUNITY, CELL SIGNALING, CHEMOKINES, TOXICOLOGY, MicroRNA, ECM & ADHESION, SIGNALING TRANSDUCTION, and STEM CELL.

PCR Arrays are now available through QIAGEN

www.SABiosciences.com/Science8.php

* Valid for the USA, Germany, France, UK, Italy, Australia, Switzerland and other select countries; please visit the link above for details.
More than 100 pathway gene expression PCR Arrays are available. Find your pathway on the webpage above.
