

# Making gasoline power history

Researchers at Northeastern University's Center for Renewable Energy Technology have received a \$6.38 million grant from the U.S. Department of Energy to develop a less costly, more efficient fuel-cell catalyst. The goal: to bring a new generation of more affordable all-electric cars to market by 2018—and help make at least one kind of fossil fuel go the way of the dinosaur.

Our broad range of interdisciplinary research turns discoveries into solutions, with a focus on global challenges in health, security, and sustainability.
