COVER

False-colored backscattered electron image of a small rocky particle, 150 micrometers in size, recovered from the surface of near-Earth asteroid 25143 Itokawa by the Japanese spacecraft Hayabusa. Mineralogy and chemistry of the particle indicate that the asteroid consists of very primitive solar system material and has had a complex formation history. See the series of Reports beginning on page 1113.

REPORTS

- 1113 Itokawa Dust Particles: A Direct Link Between S-Type Asteroids and Ordinary Chondrites
T. Nakamura et al.
>> *Science Podcast*
- 1116 Oxygen Isotopic Compositions of Asteroidal Materials Returned from Itokawa by the Hayabusa Mission
H. Yurimoto et al.
- 1119 Neutron Activation Analysis of a Particle Returned from Asteroid Itokawa
M. Ebihara et al.
- 1121 Incipient Space Weathering Observed on the Surface of Itokawa Dust Particles
T. Noguchi et al.
>> *News story p. 1081*
- 1125 Three-Dimensional Structure of Hayabusa Samples: Origin and Evolution of Itokawa Regolith
A. Tsuchiyama et al.
- 1128 Irradiation History of Itokawa Regolith Material Deduced from Noble Gases in the Hayabusa Samples
K. Nagao et al.
Laboratory analysis of samples returned from an asteroid establishes a direct link between asteroids and meteorites and provides clues to the complex history of the asteroid and its surface.
>> *Perspective p. 1098*
- 1131 Synthesis and Structure Determination of the Hierarchical Meso-Microporous Zeolite ITQ-43
J. Jiang et al.
A zeolite with microporous channels (6 to 7 angstrom diameter) and mesoporous channels (~2-nanometer diameter) was made.
- 1134 Unraveling the Perplexing Structure of the Zeolite SSZ-57
C. Baerlocher et al.
X-ray analysis reveals a zeolite structure in which 10-sided channels are periodically disrupted by 12-sided channels.

- 1137 *optix* Drives the Repeated Convergent Evolution of Butterfly Wing Pattern Mimicry
R. D. Reed et al.
Heliconius butterfly wing pattern mimicry is driven by cis-regulatory variation of the *optix* gene.
>> *Perspective p. 1100*
- 1141 Chaperonins Facilitate KNOTTED1 Cell-to-Cell Trafficking and Stem Cell Function
X. M. Xu et al.
Active transfer of a transcription factor between plant cells is required for stem cell maintenance.
>> *Perspective p. 1103*
- 1144 Nectins Establish a Checkerboard-Like Cellular Pattern in the Auditory Epithelium
H. Togashi et al.
Interactions between adhesion molecules support the checkerboard-like patterning of cells in the cochlea.
>> *Perspective p. 1099*
- 1147 Impacts of Fishing Low-Trophic Level Species on Marine Ecosystems
A. D. M. Smith et al.
High harvest levels of low-trophic level fishes may have cascading marine ecosystem effects.
- 1151 Expanding the Genetic Code of *Escherichia coli* with Phosphoserine
H.-S. Park et al.
Engineered bacterial translation can be used to direct site-specific insertion of an amino acid into proteins.
- 1154 Exome Sequencing of Head and Neck Squamous Cell Carcinoma Reveals Inactivating Mutations in *NOTCH1*
N. Agrawal et al.
- 1157 The Mutational Landscape of Head and Neck Squamous Cell Carcinoma
N. Stransky et al.
The mutational profile of head and neck cancer is complex and may pose challenges to the development of targeted therapies.
>> *Perspective p. 1102*
- 1161 *MED23* Mutation Links Intellectual Disability to Dysregulation of Immediate Early Gene Expression
S. Hashimoto et al.
A single missense mutation is linked to intellectual impairment.
