ON THE WEB THIS WEEK

- >> **Science Podcast**
Listen to stories on the deep history of animals on the planet, coexisting with carnivores, Earth's atmosphere more than 3 billion years ago, and more.
- >> **Find More Online**
Check out *Science Express*, our podcast, videos, daily news, our research journals, and *Science Careers* at www.sciencemag.org.

COVER

Immunostained fluorescence microscopy image of a biomarker of endogenous withdrawal (phosphorylated extracellular regulated kinase, red) that increases in mouse spinal cord neurons (green) during opioid receptor blockade (image width: 250 micrometers). Inflammation or injury to the skin causes μ -opioid receptors to become constitutively active, which leads to long-term relief from chronic pain, but at the expense of endogenous opioid dependence. See page 1394.

RESEARCH ARTICLES

- 1358** Dynamically Reshaping Signaling Networks to Program Cell Fate via Genetic Controllers
K. E. Galloway et al.
A synthetic control module inserted into yeast cells allows control of cell fate in response to an environmental signal.
Research Article Summary; for full text: <http://dx.doi.org/10.1126/science.1235005>
>> *Perspective p. 1349*
- 1359** Protection Against Malaria by Intravenous Immunization with a Nonreplicating Sporozoite Vaccine
R. A. Seder et al.
Intravenous immunization with an attenuated whole malaria sporozoite vaccine protected volunteers in a phase I clinical trial.
>> *Perspective p. 1352*

REPORTS

- 1365** Linear Structures in the Core of the Coma Cluster of Galaxies
J. S. Sanders et al.
X-ray observations from space provide insight into the merging history of one of the nearest galaxy clusters.
- 1368** Control of Surface Charges by Radicals as a Principle of Antistatic Polymers Protecting Electronic Circuitry
H. T. Baytekin et al.
Removal of radicals destabilizes surface charges, providing a means for rapid dissipation of static electricity.
- 1371** Glassy Dynamics in Condensed Isolated Polymer Chains
M. Tress et al.
The glass transition of isolated polymer chains is mainly bulk-like, with altered dynamics only for segments at the substrate.
>> *Perspective p. 1351*
- 1374** Lewis Acidity of Organofluorophosphonium Salts: Hydrodefluorination by a Saturated Acceptor
C. B. Caputo et al.
Certain four-coordinate phosphorus cations prove sufficiently Lewis acidic to sever carbon-fluorine bonds.
>> *Perspective p. 1348*
- 1377** Deep-Focus Earthquake Analogs Recorded at High Pressure and Temperature in the Laboratory
A. Schubnel et al.
Fractures generated by mineral phase transitions in the mantle produce acoustic emissions that resemble deep earthquakes.

- 1380** Energy Release of the 2013 M_w 8.3 Sea of Okhotsk Earthquake and Deep Slab Stress Heterogeneity
L. Ye et al.
Distribution of strong and weak zones in the subducting slab controlled the extent of the largest recorded deep earthquake.
- 1384** Nonlegumes Respond to Rhizobial Nod Factors by Suppressing the Innate Immune Response
Y. Liang et al.
Nitrogen-fixing bacteria dampen immune responses in their plant hosts.
- 1387** Structure of the CCR5 Chemokine Receptor–HIV Entry Inhibitor Maraviroc Complex
Q. Tan et al.
The crystal structure of the HIV co-receptor CCR5 bound to the HIV drug maraviroc provides insight into how HIV enters cells.
>> *Perspective p. 1347*
- 1390** Pivotal Roles of cGAS–cGAMP Signaling in Antiviral Defense and Immune Adjuvant Effects
X.-D. Li et al.
The cytosolic DNA sensor cyclic guanosine monophosphate–adenosine monophosphate synthase is essential for antiviral immunity in vivo.
- 1394** Constitutive μ -Opioid Receptor Activity Leads to Long-Term Endogenous Analgesia and Dependence
G. Corder et al.
Transient inflammation can lead to prolonged activation of pain-relieving opioid receptors in the spinal cord.
- 1399** Human LILRB2 Is a β -Amyloid Receptor and Its Murine Homolog PirB Regulates Synaptic Plasticity in an Alzheimer's Model
T. Kim et al.
A potential β -amyloid receptor in neurons regulates ocular dominance in mouse brain development.
>> *Perspective p. 1354*
- 1404** An Epidermal MicroRNA Regulates Neuronal Migration Through Control of the Cellular Glycosylation State
M. E. Pedersen et al.
A conserved microRNA affects the characteristics of extracellular proteoglycans that direct migrating neurons in nematodes.
