A pregnant female tsetse fly (Glossina morsitans), roughly equivalent in size to a housefly. Tsetse flies are the sole carriers of human African trypanosomiasis (sleeping sickness). See pages 349 and 380 for a description of the sequencing and annotation of the tsetse fly genome.

</table>
| 376  | Cryo-EM Study of the Chromatin Fiber Reveals a Double Helix Twisted by Tetranucleosomesal Units  
F. Song et al.  
The structure of a segment of chromatin reveals the importance of the linker histone in determining its conformation.  
>> Perspective p. 370 |
| 380  | Genome Sequence of the Tsetse Fly (Glossina morsitans): Vector of African Trypanosomiasis  
International Glossina Genome Initiative  
Blood-sucking tsetses transmit protozoan parasites, harbor multiple symbionts, reproduce viviparously, and lactate.  
>> News story p. 349 |
| 386  | Discovery of Brainwide Neural-Behavioral Maps via Multiscale Unsupervised Structure Learning  
J. T. Vogelstein et al.  
An atlas is generated to reveal activation of which specific neurons in a Drosophila larva produce specific behaviors.  
>> Perspective p. 372 |
| 402  | Preservation of a Preglacial Landscape Under the Center of the Greenland Ice Sheet  
P. R. Bierman et al.  
Soil has been frozen to the central part of the bed of the Greenland Ice Sheet for at least 2.7 million years.  
Organic Matter Stoichiometry, Flux, and Oxygen Control Nitrogen Loss in the Ocean  
A. R. Babbin et al.  
The variable ratio of denitrification to ammonox in the ocean is due to variations in organic matter quality and quantity.  
Conversion of Channelrhodopsin into a Light-Gated Chloride Channel  
J. Wietek et al.  
A class of directly light-gated anion channels can be used to block neuronal output in a fully reversible fashion.  
>> Perspective p. 369; Report p. 420 |
| 406  | High-Resolution Genomic Analysis of Human Mitochondrial RNA Sequence Variation  
A. Hodgkinson et al.  
Mitochondrial posttranscriptional variation is common among humans and can be attributed to a nuclear gene.  
Single-Cell Genomics Reveals Hundreds of Coexisting Subpopulations in Wild Prochlorococcus  
N. Kashtan et al.  
Covariation between the core alleles and flexible gene content of a marine cyanobacterium underpins vast diversity.  
Structure-Guided Transformation of Channelrhodopsin into a Light-Activated Chloride Channel  
A. Berndt et al.  
A class of directly light-gated anion channels can selectively attend to one of two overlapping objects.  
A Chloroplast Retrograde Signal Regulates Nuclear Alternative Splicing  
E. Petrilio et al.  
In plants, light-dependent regulation of nuclear alternative splicing involves a signal generated within the chloroplast.  
>> Perspective p. 366 |
