ON THE COVER

A regenerating zebrafish heart, 7 days after injury to the apex of the ventricle (bottom). Red stain, epicardial cell layer; green stain, transgenic *ctgfa* reporter expression; blue stain, cell nuclei. Unlike in humans,

lost cardiac muscle regenerates in zebrafish in 30 to 60 days, with minimal scarring. From single cells to mammalian organ systems, the ravages of disease and injury are often, but not always, countered by repair and regeneration mechanisms. See the special section beginning on page 1020. Image: Amy L. Dickson and Kenneth D. Poss, Duke University

NEWS

IN BRIEF

990 News at a glance

IN DEPTH

993 OLDEST MEMBERS OF OUR SPECIES DISCOVERED IN MOROCCO

New fossils and dates put a face on early *Homo sapiens* *By A. Gibbons*

994 ROMANIAN RESEARCHERS DECRY SUDDEN POWER GRAB

Government appoints loyalists to four councils, limits foreign influence *By A. Nistoroiu*

996 CIRCULAR DNA THROWS BIOLOGISTS FOR A LOOP

Studies hint at health and disease roles of unusual DNAs *By E. Pennisi*

997 DATA CHECK: CRITICS CHALLENGE NIH FINDING THAT BIGGER LABS AREN'T NECESSARILY BETTER

Agency-backed analysis led to policy move to cap grant support for big labs *By J. Kaiser*

998 RETHINKING THE DREADED R-WORD

Two groups propose ways to make it easier to retract a paper—but not calling it a retraction *By M. Enserink*

999 INDIA RESURRECTS FORGOTTEN LEPROSY VACCINE

Large-scale use of vaccine aims to break stalemate against the disease by protecting people most at risk *By S. Kumar*

1000 CAN U.S. STATES AND CITIES OVERCOME PARIS EXIT?

Emissions will keep declining, but likely not enough for the United States to meet 2025 goal *By W. Cornwall*

FEATURE

1001 SAVING THE 'GOD OF UGLY THINGS'

Nearly wiped out by invasive mammals, New Zealand's mouse-sized insects, called giant weta, are making a comeback *By E. Pennisi*
