

Walling out floodwaters in Bangladesh

The roots of resilience

FEATURES

970 INTRODUCTION

By J. Couzin-Frankel

972 AFTER THE DELUGE

Twelve years after Hurricane Katrina, social scientists seek lessons from its survivors
By K. Servick

976 LESSONS IN RESILIENCE

In war zones and refugee camps, researchers are putting resilience interventions to the test
By E. Underwood

980 BENDING TO THE WATER'S WILL

In flood-prone Bangladesh, resilience can mean letting water have its way
By W. Cornwall

NATURE'S STRATEGIES

975 Fish that switch sex to thrive

By E. Pennisi

978 Resilience by regeneration

By E. Pennisi

979 Stealing genes to survive

By M. Leslie

982 Squirrels with a rainy day fund

By M. Leslie

985 A plant that stands and fights

By E. Pennisi

PERSPECTIVES

986 SEEKING RESILIENCE IN MARINE ECOSYSTEMS

With recovery windows closing, how can reef corals resist climate change?
By E. S. Darling and I. M. Côté

988 WHAT MAKES A TERRESTRIAL ECOSYSTEM RESILIENT?

A complex set of biotic and abiotic factors determines the resilience of an ecosystem
By K. J. Willis et al.

ON THE COVER

Gopal Mondal stands on the remnants of land at the edge of Polder 32, an artificial island in Bangladesh. Mondal, a resident of Polder 32's Gunari village, lost his land because of river

erosion. As natural and human forces threaten homes and livelihoods, resilience—the ability to adapt to adversity, with whatever approach proves most effective—helps people and communities endure. See page 970. Photo: Tanmoy Bhaduri
