

The Best Antibody Discovery Technology Is Now at Your Fingertips

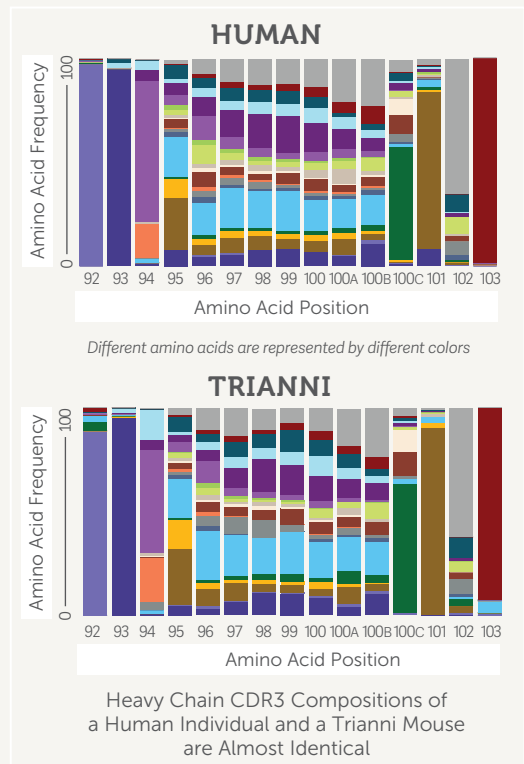

Trianni Mouse Antibodies are a Match for Humans

The Trianni Mouse® platform is a transgenic antibody discovery platform offering the entire human variable gene diversity in a single organism.

The V(D)J gene segments in the Trianni Mouse are chimeric, but the variable domains of antibodies made by the mouse are entirely human. The result is human antibody leads generated from antibody genes optimized for function in the mouse.

To learn more about this innovative platform and how it can help you leave your mark on therapeutic antibody discovery and development, visit Trianni.com.
