Research at the intersection of the social and life sciences

The newly launched NOMIS & Science Young Explorer Award recognizes bold, early-career researchers with an M.D., Ph.D., or M.D./Ph.D. who ask fundamental questions at the intersection of the social and life sciences. It is awarded to scientists who conduct research with an enthusiasm that catalyzes cross-disciplinary collaboration and who take risks to creatively address relevant and exciting questions.

Award winners will receive a cash prize of up to $15,000, and their essay submissions will be published in Science. They will also be invited to share their ideas with leading scientists in their respective fields at an award ceremony and to present their research to the NOMIS Board of Directors for potential future funding.

Apply by May 15, 2021

BIAL Award in Biomedicine 2021 - €300,000
Seeks to recognize a work published in the broad biomedical field after 1 January 2012, the results of which are considered of exceptional quality and scientific relevance.
Only works nominated by the voting members of the Jury, by the members of the Scientific Board of the BIAL Foundation, by previous BIAL award winners or by Scientific Societies may be considered candidates. The Jury may also invite other scientific institutions to submit nominations. Self-nominations are not allowed.

Jury
President
Ralph Adolphs

Members
European Research Council
Geneviève Almazni | Paola Rovolenta
Council of Rectors of Portuguese Universities
Maria do Carmo Fonseca | Fátima Carneiro
European Medical Association
Vincenzo Costigliola | Olga Golubitskaya

Scientific Board of the BIAL Foundation
Hugo Critchley | Manno Witter
Previous winners of the BIAL Award
Peter St George-Hyslop | Daniel Pipeleers
Scientific Journals
Howard Bauchner - JAMA | Eric Rubin - NEJM

Nomination form must be sent
by 30 June 2021 to fundacao@bial.com

**SARS-CoV-2 RT-PCR Kits**

Bio-Rad Laboratories’ Reliance SARS-CoV-2/FluA/FluB RT-PCR and Reliance SARS-CoV-2 RT-PCR Assay Kits have been granted emergency use authorization by the U.S. Food and Drug Administration. The multitarget Reliance SARS-CoV-2/FluA/FluB RT-PCR Assay Kit simultaneously detects and differentiates SARS-CoV-2 (the virus associated with COVID-19), influenza A, and influenza B in a single, multiplex reaction. The highly sensitive respiratory pathogen panel is intended for use with nasopharyngeal swabs and anterior nasal swabs. Bio-Rad’s Reliance SARS-CoV-2 RT-PCR Assay Kit is a multiplex test that targets two separate regions in the nucleocapsid gene (N1 and N2 regions) to ensure greater sensitivity and tolerance to potential mutations that may occur within the viral genome over time in the detection of SARS-CoV-2. Both assay kits contain the company’s standard and negative molecular controls and are validated to run on the CFX Opus 96, CFX96 Touch, and CFX96 Dx qPCR Systems, and for higher-throughput testing, can be run on the CFX Opus 384 and CFX384 Touch Systems; they are also validated to run on qPCR systems offered by other manufacturers.

**Animal-Free Enzymes for In Vitro Tissue Dissociation**

AMS Biotechnology (AMSBIO), in association with Nordmark Biochemicals (NB), is now offering animal-free Collagenase and Neutral Protease enzymes isolated from *Clostridium histolyticum*, for in vitro tissue dissociation that delivers high yields of viable cells. They are produced under good manufacturing practice guidelines using a plant-based production process that guarantees no risk of cross-contamination with animal-derived materials. These top-quality enzymes can be used on a wide range of cell/tissue types and are supported with specific protocols available based on each application. Our highly consistent, superior Collagenase and Neutral Protease are essential tissue-dissociation enzymes for tissue-engineering and regenerative-medicine applications. The high level of quality control involved in the production of these enzymes provides reliable lot-to-lot consistency with accurate analysis of proteolytic enzyme activities. AMSBIO also offers research-grade Collagenase and Neutral Protease enzymes. As each application requires different digestion conditions, this large range of Collagenase NB products offers optimal digestion conditions for a wide variety of tissue types.

**Borosilicate Glass Microplates**

Made from ultrapure-grade borosilicate glass, Porvair Sciences’ Krystal Glass Bottom microplates with Schott D 263 M technology are precision manufactured for high optical performance in high-resolution microscopy applications, such as charge-coupled device imaging and laser-scanning applications. Krystal Glass Bottom plates combine the advantageous optical properties of glass, low background, and low birefringence with the versatility of a microplate. The latest Krystal microplate is available in two different thicknesses—50 μm and 175 μm—and in addition, a high-performance version D 263 M/1.5-H plate with a thickness tolerance of +/- 5 μm is available for high-sensitivity applications. Precisely manufactured to SBS/ANSI microplate dimensions, the affordable Krystal Glass Bottom design is fully compatible with all commercially available plate readers, robotic sample processors, and automated liquid-handling systems. The complete Krystal range of glass bottom microplates is available either in tissue-culture treated format to optimize cell growth, or without surface modification.

**Flow Chemistry Mixer**

The Uniqsis range of glass static mixer (GSM)/chip reactor blocks produces an efficient, turbulent mixed reagent stream for flow chemistry reactions that is not diffusion dependent. Now available in sizes from 270 μL to 20 mL, our recently expanded range of GSM chips can be used to perform reactions from ~80°C to over 150°C. GSM chips up to 2 mL can be operated up to 40 bar and are available in two-channel or three-channel inlet configurations. Larger GSM chips of 10 mL and 20 mL have a premixing channel followed by a residence domain and can operate up to 10 bar. Uniqsis GSM chips are precision machined from inert borosilicate glass to withstand a wide temperature range and can be conveniently attached to a FlowSyn column heater module, Cold Coil module, or Polar Bear Plus cryogenic reactor module.

---

**Small-Scale Photoreactor**

The DrySyn Illumin8 from Asyst allows users to run up to eight parallel photochemical reactions at a time in precision borosilicate tubes of up to 6 mL in volume. The unit mounts on a standard magnetic hotplate stirrer, enabling powerful agitation and heating (up to 80°C). Convenient connectors on top of the unit allow for an inert atmosphere or vacuum to be applied to each reaction tube. Compact in size, the DrySyn Illumin8 features a ring of eight high-power ultraviolet (365 nm) or blue (450 nm) light-emitting diodes (LEDs) with safety interlocks to ensure light-tight photochemical reactions. With each LED positioned close to a corresponding reaction tube, the unit efficiently delivers an even photon flux to each reaction, enhancing the consistency of your photochemical reactions. The DrySyn Illumin8 is simple to set up, flexible in operation, and easy to use, with just one on/off switch.

**SARS-CoV-2 B.1.351 (S. African Variant) Spike Protein Mutants**

As potentially more transmissible variants of SARS-CoV-2 emerge, understanding how mutations in the spike protein impact SARS-CoV-2 behavior is critical. With the pPACK-SPIKE B.1.351 RBD Mutations Lentivector Packaging Mix, you can safely characterize the SARS-CoV-2 spike protein, which has three key receptor-binding domain mutations found in the emerging South African lineage B.1.351 (also known as 501Y.V2)—K417N, E484K, N501Y—making it an ideal reagent for vaccine and antiviral drug discovery projects. You can conduct a range of SARS-CoV-2 studies under biosafety level 2 conditions, including neutralization assays and studies of virus interactions with host surface proteins, as well as the development of vaccines and therapeutics. For added convenience we also offer pPACK-BALD, an envelope protein-free lentivector packaging mix that can be used as a negative control for any pPACK-SPIKE study or to create lentivirus particles pseudotyped with the envelope protein of your choice.

Plant Phenomics

*Plant Phenomics* is a Science Partner Journal published in affiliation with the State Key Laboratory of Crop Genetics & Germplasm Enhancement, Nanjing Agricultural University (NAU) and distributed by the American Association for the Advancement of Science (AAAS). *Plant Phenomics* publishes novel research that advances both in field and indoor plant phenotyping, with focus on data acquisition systems, data management, data interpretation into structural or functional traits, integration into process based or machine learning based models, and connects phenomics to applications and other research domains.

Submit your research to *Plant Phenomics* today!
Learn more: spj.sciencemag.org/plantphenomics

The Science Partner Journals (SPJ) program was established by the American Association for the Advancement of Science (AAAS), the non-profit publisher of the Science family of journals. The SPJ program features high-quality, online-only, Open-Access publications produced in collaboration with international research institutions, foundations, funders, and societies. Through these collaborations, AAAS furthers its mission to communicate science broadly and for the benefit of all people by providing top-tier international research organizations with the technology, visibility, and publishing expertise that AAAS is uniquely positioned to offer as the world’s largest general science membership society.
