LE CONTE, Geology; W. M. DAVIS, Physiography; O. C. MARSH, Paleontology; W. K. BROOKS, C. HART MERRIAM, Zoology; S. H. SCUDDER, Entomology; N. L. BRITTON, Botany; HENRY F. OSBORN, General Biology; H. P. BOWDITCH, Physiology; J. S. BILLINGS, Hygiene; J. MCKEEN CATTELL, Psychology; DANIEL G. BRINTON, J. W. POWELL, Anthropology.

FRIDAY, FEBRUARY 12, 1897.

SOME PRESENT POSSIBILITIES IN THE ANALYSIS OF IRON AND STEEL.*

CONTENTS:

<i>Some Present Possibilities in the Analysis of Iron and Steel</i> : C. B. DUDLEY.....	241
<i>Toronto Meeting of the British Association</i> : A. B. MACALLUM.....	251
<i>Geology at the British Association</i> : W. W. WATTS.....	252
<i>Relations of Tarsius to the Lemurs and Apes</i> : CHARLES EARLE.....	258
<i>The Primary Segmentation of the Brain</i> : C. F. W. MCCLURE.....	260
<i>Charles E. Bendire</i> : C. HART MERRIAM.....	261
<i>Current Notes on Physiography</i> :— <i>Northwestern Oregon; Glacial Deposits of Indiana; Scientific Geography of Italy; Notes on Ashanti</i> : W. M. DAVIS.....	263
<i>Current Notes on Meteorology</i> :— <i>Cloud Heights; Fog Possibilities; International Balloon Meteorology</i> : R. DEC. WARD.....	264
<i>Current Notes on Anthropology</i> :— <i>The Shell Gorges of North America; The Red Race of Madagascar; Glacial Man in Ohio</i> : D. G. BRINTON.....	265
<i>Notes on Inorganic Chemistry</i> : J. L. H.....	266
<i>Scientific Notes and News</i> :— <i>A Director of Scientific Work for the Department of Agriculture; Young's 'Reversing Layer'; Motor Carriages; General</i>	267
<i>University and Educational News</i>	274
<i>Discussion and Correspondence</i> :— <i>'Compliment or Plagiarism?'</i> BEMAN AND SMITH. <i>Professor Jastrow's Test on Diversity of Opinion</i> : J. H. HYSLOP.....	275
<i>Scientific Literature</i> :— <i>Higher Mathematics</i> : ALEXANDER ZIWET. <i>Venable on the Development of the Periodic Law, Mason's Notes on Quantitative Analysis, Cairns' Manual of Quantitative Chemical Analysis</i> : W. A. N.....	277
<i>Scientific Journals</i> :— <i>The Auk; The Journal of Geology</i> : H. F. B.....	281
<i>Societies and Academies</i> :— <i>The New York Academy of Sciences—Subsection of Anthropology and Psychology</i> : LIVINGSTON FARRAND. <i>Torrey Botanical Club</i> : EDWARD S. BURGESS.....	283
<i>New Books</i>	284

To the analytical chemist there are few substances in nature more interesting than a piece of pig iron, few substances which have received more study, and few which present chemical problems more difficult of solution. The amount of work which has already been done in connection with this very common but very complex substance is something enormous. Indeed, if we add to the study which has already been put on pig iron itself the work which has been done on what may perhaps fairly be called its progenitors, *viz.*, the ores, the fuel, the flux and the refractory materials used in its production, and then consider still further the labor already expended in the analysis of what we may call the progeny of pig iron, *viz.*, castings, wrought iron, malleable iron and the numerous grades and kinds of steel, made by the various processes of the present day, we shall surely be safe in saying that more chemical work has been done in connection with pig iron than with any other substance in nature. Is it too much to affirm that at the present time one-third, possibly one-half, of all the chemical work done in the world is in connection with the iron industry, either in the solution of unworked-out problems, the

* Presidential address delivered at the Troy meeting of the American Chemical Society, December 29, 1896.
