

"MODEL A" LABORATORY POTENTIOMETER

Made in U. S. A.

A new instrument designed and built for use wherever a high grade Potentiometer is needed for laboratory purposes.

Results of the highest accuracy are obtained by moving three dials in the potentiometer circuit through not more than one turn each. The third dial covers a single turn of carefully calibrated slide wire.

The dial positions and all other adjustments are in full view looking down on the potentiometer from directly in front of it, so that the operator does not have to change his position in order to make a reading. Thus rapid and easy manipulation is possible.

For quick measurements of moderate accuracy a small galvanometer is included in the set.
