No. 1588

CONTENTS

<i>Iron, the Oxygen-Carrier of Respiration-Ferment:</i> DR. OTTO WARBURG	575
<i>John Muir, Naturalist and Poet:</i> DR. DAVID STARR JORDAN	582
<i>Scientific Events:</i>	
<i>John Fillmore Hayford; The Structure of Light; Seismology in Canada; The Unveiling of a Tablet in Honor of Thomas Alva Edison; The Naples Zoological Station and the American Association</i>	583
<i>Scientific Notes and News</i>	586
<i>University and Educational Notes</i>	588
<i>Discussion and Correspondence:</i>	
<i>Fresh-water Medusae in the Panama Canal Zone:</i> PROFESSOR FRANK SMITH. <i>The Taxonomy and Range of Poison Ivy:</i> DR. JAMES B. MCNAIR. <i>A Name for the N in Cos NT:</i> PROFESSOR A. T. JONES. <i>Titanic Acid in the Potato Tuber:</i> DR. WILLIAM P. HEADDEN. <i>Chemical Spelling Con- tinued:</i> PROFESSOR C. A. JACOBSON. <i>Musselshell River:</i> DR. HAROLD S. PALMER	588
<i>Scientific Books:</i>	
<i>La "Thiende" de Simon Stevin:</i> PROFESSOR FLORIAN CAJORI. <i>Grout's Mosses with a Hand Lens:</i> PROFESSOR G. E. NICHOLS	591
<i>Scientific Apparatus and Methods:</i>	
<i>Waterproofing Labels for Wet Specimens:</i> A. A. DOOLITTLE	591
<i>Special Articles:</i>	
<i>On the Contents of Oxygen in the Ocean on Both Sides of Panama:</i> DR. JOHS SCHMIDT	592
<i>The Pennsylvania Academy of Science:</i> T. L. GUYTON	593
<i>The Utah Academy of Sciences:</i> DR. C. ARTHUR SMITH	594

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. McKeen Cattell and published every Friday by

THE SCIENCE PRESS

Lancaster, Pa.

Garrison, N. Y.

New York City: Grand Central Terminal.

Annual Subscription, \$6.00. Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

Entered as second-class matter July 18, 1923, at the Post Office at Lancaster, Pa., under the Act of March 8, 1879.

IRON, THE OXYGEN-CARRIER OF RESPIRATION-FERMENT¹

THE idea that iron plays a part in the oxidation reactions of the living cell has appeared in a more or less definite form in the literature of the last fifty years. But since it was not possible to establish the idea and to differentiate it as correct from the false ideas which appeared at the same time, it was dropped and became worthless for science.

I

We maintain that in respiring cells there is a cycle of the form

In this cycle molecular oxygen reacts with bivalent iron, whereby iron in a higher state of oxidation is formed. The oxidized iron reacts with the organic substance and is again reduced to bivalent iron. Reactions in the direction of the dotted arrow do not occur; molecular oxygen never reacts directly with the organic substance.

According to this figure the organic substance is as little autoxidizable inside the cell as outside, the iron alone being autoxidizable. We know that iron can react with molecular oxygen in a test tube. Then, if our scheme is true, the problem of respiration ceases to exist, because it is solved if we are able to trace back the process of respiration to the reactions which occur in the test tube.

Not every form of bivalent iron reacts with molecular oxygen, and not every form of iron of higher valence reacts with organic substances. In order that iron may act catalytically according to our scheme, certain conditions with respect to the form in which the iron is present must be satisfied. It will be our problem to show that catalytically active forms of iron occur in living cells and in what way such forms of iron can be prepared by the chemist.

¹Lecture delivered at the Rockefeller Institute for Medical Research, New York.
