

# The Silverman Illuminator

**P**ARTICULARLY useful in Mineralogy, Metallurgy and Petrography because the oblique illumination obtained by its use enables one to:

1. Observe the normal color of minerals.
2. Examine inclusions and cavities in polished sections.
3. Distinguish gangue mineral from ore mineral.
4. Investigate the internal structure of transparent specimens and examine minerals below the surface.
5. Recognize differences in hardness in a section by emphasized relief which helps to identify the minerals.
6. Observe the action of reagents.

The SILVERMAN Illuminator can be used with magnifications as high as 400 diameters in Photomicrography. By its use the light is evenly distributed over the whole field so that few negatives of uneven density are produced. This is possible only with the greatest care when using vertical illumination.

The SILVERMAN Illuminator finds application in every field of Microscopy such as:

Metallurgy  
Metallography  
Mineralogy  
Plant Pathology  
Steel and Iron

Brasses and Bronzes  
Textiles  
Paper  
Rubber  
Vitreous Enamels

Refractories  
Glass  
Abrasives  
Etc., etc.
