

BECBRO

LABORATORY RHEOSTATS

Screw Adjustment Type

“BECBRO” Rheostats carried in stock include numerous different ratings.

Included in the stock sizes are tubular types of lengths 20"; 16"; 8"; the resistance element being Wire or Ribbon.

Each tube has a slider adjustment which varies the resistance by very small steps from Zero to total value of the unit.

The approximate total resistance of these stock rheostats vary from 0.3 ohm to 30,000 ohms per unit, and have corresponding current capacities of 25 amperes down to 0.1 ampere.

Rheostats of more or less special construction include the Single Tube equipped with two rods and two sliders; Single and Double Tube equipped with Screw Adjustment (see cut); Double and Triple Tubes mounted as a Unit; Non-Inductive Wound Tubular and Stone Types.

“BECBRO” Carbon Compression Rheostats with corresponding Normal Ratings of 250; 1000; 1500; 3000 Watts.

“HY-SPEED” MIXERS

with “PUSH PULL”

Propellers are now used in hundreds of the largest plants and laboratories.

MANY FEATURES

clamp to any tank, operate from lamp circuit, mix better, cost less

552 Seventh Ave.

New York, N. Y.

JAGABI RHEOSTATS

are wound on enameled tubes, as illustrated above. By means of sliding-contacts the resistance can be varied from zero to full capacity, in exceedingly small steps.

In resistance ratings, JAGABI Rheostats vary from 0.34 ohm up to 30,000 ohms, and in corresponding current values from 25 amperes down to .1 ampere

Especially suited for use in Educational, Research and Industrial Laboratories. Write for Bulletin S-1040
JAMES G. BIDDLE, 1211-13 ARCH ST., PHILADELPHIA

TAMI Pocket Microscope

25X to 225X

Of vast utility and great efficiency; simple to operate; replaces to a great extent the complicated, bulky, expensive Laboratory instrument. The removable base permits its use for examining large and opaque objects. Professional men requiring minute examinations appreciate the compactness of the "TAMI." Enclosed in protective metal hood 4" high; 1 3/4" dia.; wt. 15 ozs. Increased magnification obtained by extending its telescope tubes.

Formerly sold for \$30. Now **\$20** offered to scientists at.....

JOHN H. NORTHROP

W. J. V. OSTERHOUT

CONTENTS OF VOLUME VII, NO. 6, JULY 20, 1925:

PARKER, G. H. Carbon dioxide from the nerve (cor.) of the lobster.

HARVEY, E. NEWTON. The inhibition of *Cyprid* luminescence by light.

HARVEY, E. NEWTON. The effects of light on luminous bacteria.

HAYWOOD, CHARLOTTE. The relative importance of pH and carbon dioxide tension in determining the cessation of ciliary movement in acidified sea water.

CROZIER, W. J., and STIER, T. B. Critical increment for opercular breathing rhythm of the goldfish.

CROZIER, W. J., and STIER, T. B. Temperature characteristic for heart beat frequency in *Limax*.

WETZEL, NORMAN C. The kinetics of starvation. II. The loss of weight in pigeons subsisting on water alone.

GUSTAFSON, FELIX G. Diurnal changes in the acidity of *Bryophyllum calycinum*.

NORTHROP, JOHN H., and KUNITZ, M. An improved type of microscopic electrocataphoresis cell.

ORR, PAUL RUDBERT. Critical thermal increments for oxygen consumption of an insect: *Drosophila melanogaster*.

BODINE, JOSEPH HALL, and FINK, DAVID E. A simple micro vessel with electrode for determining the hydrogen ion concentration of small amounts of fluid.

MORRISON, THOMAS F. Studies on luminous bacteria. II. The influence of temperature on the intensity of the light of luminous bacteria.

INDEX TO VOLUME VII.

SUBSCRIPTION PRICE PER YEAR (ONE VOLUME), \$5.00.
