No. 1618

SOME PSYCHOLOGICAL EXPERIMENTS¹

CONTENTS

<i>The American Association for the Advancement of Science:</i>	
<i>Some Psychological Experiments:</i> DR. J. MCKEEN CATTELL	1
<i>Oceanographic Investigations of the Scripps Institution for Biological Research:</i> DR. T. WAYLAND VAUGHAN	8
<i>National Research Endowment</i>	10
<i>Scientific Events:</i>	
<i>Presentation of the Copley Medal of the Royal Society to Professor Einstein; The Award of Gold Medals by the American Geographical Society; Revision of Educational Methods in the Yale School of Medicine; The 1926 Meeting of the Pacific Division of the American Association</i>	11
<i>Scientific Notes and News</i>	14
<i>University and Educational Notes</i>	17
<i>Discussion and Correspondence:</i>	
<i>Projection of Ultra-Violet Lines:</i> PROFESSOR PAUL F. GAEHR. <i>Influence of Air and Sunshine on the Growth of Trees:</i> DR. W. J. SPILLMAN. <i>An Unusual Strain of Serratia Marcescens:</i> RACHEL SCHREINER and LAETITIA M. SNOW. <i>The Clearness of the Ohio River:</i> DR. FREDERICK EHRENFELD	18
<i>Scientific Books:</i>	
<i>Williston's Osteology of the Reptiles:</i> DR. C. C. MOOK	20
<i>Special Articles:</i>	
<i>The Presence of Sulphate-Reducing Bacteria in Oil Field Waters:</i> PROFESSOR EDSON S. BASTIN	21
<i>The Tennessee Academy of Science:</i> ROSCOE NUNN ..	24
<i>Science News</i>	x

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. McKeen Cattell and published every Friday by

THE SCIENCE PRESS

Lancaster, Pa.

Garrison, N. Y.

New York City: Grand Central Terminal.

Annual Subscription, \$6.00. Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

Entered as second-class matter July 18, 1923, at the Post Office at Lancaster, Pa., under the Act of March 8, 1879.

IF one of us lifts a hand as soon as a sound is made, the interval elapsing between the sound and the movement will be in the neighborhood of one seventh of a second. This reaction time is measured in thousandths of a second because it is so short and so regular that a very small unit is required. The symbol σ for a thousandth of a second, corresponding to μ for a thousandth of a millimeter, was introduced by me in psychology before it was needed in any physical science. It is evident that in making such measurements psychology is an experimental and an exact science.

During the brief period of the reaction a complicated process takes place. The sense-organ responds in a selective way, the impulse travels along a sensory nerve and perhaps through the spinal cord to lower centers of the brain, then to a higher center, where a selective impulse is formed and is sent back through motor centers and tracts to a muscle that it innervates. The study of these processes and organs—receptors, conductors, reflectors, effectors—belongs primarily to physiology, but any consciousness that may be involved and the total response of the individual are the province of psychology. The sensori-motor arc is a unit; physiology and psychology are as closely intertwined as are physics and chemistry in the study of the atom.

The time of reaction varies with the stimulus and the movement, with the condition of the sense-organ and the muscle, with the paths of conduction, with the situation in the nervous centers. Thus the time for a given individual may on the average be 1σ —one thousandth of a second—longer with the left hand than with the right. It may be 20σ longer for light than for sound, a photochemical process in the retina being here involved. It may be 2σ shorter when the intensity of a sound is doubled; thus in so far as there is a logarithmic relation we have the beginnings of a mathematical psychology. The time depends on the condition of the brain centers as related to attention, fatigue and other factors.

As there is no break in continuity between the fertilized ovum and the adult, or, apart from mutations or possible critical points, between the unicellular organism and the highest vertebrate, so

¹ Address of the retiring president of the American Association for the Advancement of Science, given at Kansas City on December 28, 1925.
