VOL. LXXII

FRIDAY, OCTOBER 3, 1930

No. 1866

<i>Specialization in Science</i> : PROFESSOR FRANCIS RAMALEY	325
<i>Ecological Aspects of the Transition from Old Forests to New</i> : THORNTON T. MUNGER	327
<i>Obituary</i> : <i>Recent Deaths; Memorials</i>	332
<i>Scientific Events</i> : <i>The Whipsnade Zoological Garden; The National Arboretum; The First Transcontinental Fruit Transportation Laboratory; Course in the Radiological Diagnosis of Cancer; International Highway Engineers' Tours</i>	333
<i>Scientific Notes and News</i>	336
<i>Discussion</i> : <i>History of Science Source Material in College Libraries</i> : PROFESSOR E. H. JOHNSON. <i>Are Batholiths Up-Bulges of Sial?</i> PROFESSOR ALFRED C. LANE. <i>Another Capture on the New Jersey Coast of the Basking Shark, Cetorhinus maximus</i> : DR. E. W. GUDGER. <i>Observations of Lightning</i> : HAMILTON CRAIGIE. <i>Cocos and Valency</i> : DR. HENRY LEFFMANN	340
<i>Scientific Books</i> : <i>Kräusel's Die Paläobotanischen Untersuchungs-methoden</i> : PROFESSOR E. C. JEFFREY	344
<i>Scientific Apparatus and Laboratory Methods</i> : <i>An Individual Jacobsen Germinator</i> : HENRY I. BALDWIN. <i>Detection of Fungus Mycelium in Mildewed Cotton Fabrics</i> : M. W. JENNISON	345
<i>Special Articles</i> : <i>Changing the Chirp-Rate of the Snowy Tree Cricket <i>Oecanthus niveus</i> with Air Currents</i> : H. A. ALLARD. <i>Fruit-Bud Formation in the Strawberry in Spring in Southeastern States</i> : GEORGE M. DARROW and GEORGE F. WALDO	347
<i>Science News</i>	x

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. McKEEN CATTELL and published every Friday by

THE SCIENCE PRESS

New York City: Grand Central Terminal

Lancaster, Pa.

Garrison, N. Y.

Annual Subscription, \$6.00

Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

SPECIALIZATION IN SCIENCE¹

By Professor FRANCIS RAMALEY

UNIVERSITY OF COLORADO

IN the organic world it is the generalized type which gives rise to higher forms while extreme specialization means an end of progress. To illustrate from the field of botany: the mosses have been called an evolutionary failure for, although they have adopted a thousand forms, these all are too highly specialized to allow of really important advance. In the whole moss class there is a clinging to certain particular features—no freedom to produce or even to suggest anything non-moss like. Mosses have rung changes upon non-essentials but have always kept their own special pattern. The liverworts did not thus specialize but retained their plasticity, varying in many directions and at last giving rise to the remarkable *Anthoceros* (horned liverwort), which is almost a

lycoperid. And although the paleontologists may not find the "missing link" which connects liverworts and lycoperid there can be no doubt that the generalized liverworts, not the specialized mosses, gave origin to the next plant division.

Among animals, also, specialization stops progress. Neither the intelligent and bestrunked elephant tribe, nor the swift-footed, one-toed horse, nor the cunning members of the wolf and dog family with their great body specialization and highly developed sense organs produced the "lords of creation." Rather was it some simple creature with primitive hands and feet and jaws which began that great advance leading by one path to the grinning chimpanzee and ferocious gorilla or, by another turn, past a long series of half-human beasts to present-day man. Here, as always, the specialized types early reached a limit beyond which they could not go while generalized forms retained the
