VOL. 77

FRIDAY, FEBRUARY 17, 1933

No. 1990

<i>Genetics and Embryology</i> : PROFESSOR CHARLES ZELENY	177
<i>Obituary</i> : <i>Edwin Chapin Starks</i> : PROFESSOR F. M. MAC-FARLAND. <i>Herman Theodor Holm</i> : DR. A. F. WOODS. <i>Recent Deaths</i>	182
<i>Scientific Events</i> : <i>International Vitamin Standards; The Morris Arboretum; The Proposed Everglades National Park; In Honor of Dr. Elihu Thomson</i>	184
<i>Scientific Notes and News</i>	186
<i>Discussion</i> : <i>A New Mathematical Formula for Chemical Analysis in a Two Phase System</i> : PROFESSOR J. F. MCCLENDON. <i>Growth Retardation by the Partially Oxidized Sulfhydryl of Cysteine</i> : DR. FREDERICK S. HAMMETT. <i>Eocene Lagomorpha</i> : J. J. BURKE. <i>Blue Eyes for Brown</i> : DR. VILHJALMUR STEFANSSON	189
<i>Reports</i> : <i>The Banting Research Foundation</i> : PROFESSOR V. E. HENDERSON and D. T. FRASER	192
<i>Societies and Meetings</i> : <i>The Tennessee Academy of Science</i> : PROFESSOR JOHN T. MCGILL. <i>The Northwest Scientific Association</i> : J. W. HUNGATE	192
<i>Scientific Apparatus and Scientific Methods</i> : <i>A Simplified Method of Staining Endospores</i> : ALICE B. SCHAEFFER and PROFESSOR MAC DONALD FULTON. <i>A Demonstration Jar for White Mice</i> : PROFESSOR C. REYNOLDS	194
<i>Special Articles</i> : <i>Variability and Individuality</i> : DR. C. C. LITTLE. <i>The Mechanism of the Ionene Synthesis</i> : PROFESSOR MARSTON TAYLOR BOGERT. <i>The Vitamin D Potency of Egg Yolk from Irradiated Hens</i> : DR. GEORGE H. MAUGHAN and EDNA MAUGHAN	195
<i>Science News</i>	6

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. MCKEEN CATTELL and published every Friday by

THE SCIENCE PRESS

New York City: Grand Central Terminal
Lancaster, Pa. Garrison, N. Y.
Annual Subscription, \$6.00 Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

GENETICS AND EMBRYOLOGY¹

By Professor CHARLES ZELENY

UNIVERSITY OF ILLINOIS

THE rapid rise of genetics has led to difficulties in relating its findings to those of embryology. The view has been expressed that progress in genetics is endangered by explorations in border fields. The problem has a general significance and seems to warrant discussion before a group of zoologists.

INBREEDING AND OUTBREEDING

In treating these difficulties it may be allowable to take a theory of one of the necessary conditions of evolution and to apply it to the analogous realm of scientific progress. Among the numerous constructive contributions of genetics to the discussion of the factors of evolution is the support it gives to the view that periods of isolation alternating with periods

¹ Address of the vice-president and chairman of Section F—Zoological Sciences, American Association for the Advancement of Science, presented at the Zoologists' dinner, Atlantic City, December 29, 1932.

of intermingling among groups are necessary for progress. Inbreeding and outbreeding are both essential. New hereditary constitutions are swamped by outbreeding, and their recessive genes are incapable of expression under the condition of free contact within a large population.

With progressive isolation, small, homozygous, closely knit populations are produced. Each establishes its own clear and definite racial qualities. Many of the groups die out because of inherent weakness. Others have innate vigor and continue to flourish under isolation for a considerable period of time.

For the latter, two roads are open. If they continue in isolation their homozygous constitution leads to stagnation and their incapacity for rapid response to changing environments dooms them to extinction. If, on the other hand, after they have established themselves under isolation and are no longer in
